

RoboHelp 2019

Course #: AR-201 **Duration:** 2 days

Prerequisites

None.

Details

This course teaches you the essential RoboHelp skills needed to create and deliver user assistance (software/application help systems, operations manuals, policies and procedures, etc.). You learn the process of creating new RoboHelp projects and topics from scratch and how to import content from Microsoft Word and HTML files. You also learn how to enhance your topics with graphics and interactive multimedia (using eLearning content created in Adobe Captivate) and how to improve the navigation of your content by adding hyperlinks, indexes, and glossaries.

Increase your production efficiency by learning about cascading style sheets, variables, snippets, and master pages. You learn how to control the look of final output via Skins and presets and how to deliver content that can be consumed on any kind of device, including desktops, laptops, smartphones, and tablets using output such as Responsive HTML5, WebHelp, HTMLHelp, and even eBooks.

Software Needed

- Adobe RoboHelp 2019
